

Computer Input and Output Devices

Input Devices:

The main function of the input device is to enter the data in the computer. The various examples of input data are a mouse, keyboard, light pen, etc.

Keyboard

Mouse

Joystick

Scanner

Output Devices:

The devices which are used to display the results or information are called Output Devices. You can view the output on the monitor or you can print it on a paper using a printer. Monitor and the printer are the commonly used output devices.

Monitor

Printer

Speakers

Plotter

Both Input and Output Devices

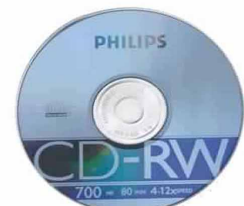

Modem

Touch screen

Head Phone

CD-RW

*L*ife must continue. And continue towards perfection, through progress, evolution, through self-initiative. Impatience can not lead to do that. Frustration is its enemy.
