

Tools and Equipment

Digital Multi Meter (DMM)

A DMM is an electronic measuring instrument that combines several measurement functions in one unit. A typical multimeter can measure voltage, current, and resistance.

Soldering Kit

Soldering kit is used to form a permanent connection between electronic components. The metal to be soldered is heated with a soldering iron and then solder is melted into the connection. Only the solder melts, not the parts that are being soldered.

Needle-Nose Pliers

Needle-Nose Pliers are come in handy for pulling components out of the breadboard when you wish to make changes to a circuit. They are also helpful for picking up small components.

Screw driver set

A screwdriver is a tool, manual or powered, for screwing and unscrewing (inserting and removing) screws.

Life must continue. And continue towards perfection, through progress, evolution, through self-initiative. Impatience can not lead to do that. Frustration is its enemy.
